

Surfboard Rearview Mirror Installation Instructions

Kit includes:

- Decals to customize your Surfboard Rearview Mirror
- New windshield button
- Windshield button glue
- Easy-to-install instructions
- Hex wrenches
- Assembly thread lock

1. For installation on a windshield without an existing button, follow instructions for (included) windshield glue to attach button to windshield. Be sure to test-fit button to assembly before gluing to ensure proper fit and placement and that location doesn't interfere with visors, etc. Be sure that you do not glue the button onto the windshield backwards or upside down (rounded end points up).
2. When attaching to windshield with existing button, look to see if the sides of the button are parallel or not. If not, attach provided adapter (arrow figure 1).

Figure 1

3. The arm that attaches to the base can be mounted in two different locations depending on the slant of your windshield, etc. (see arrows figure 2). Simply switch the set screw and the windshield arm around as needed.

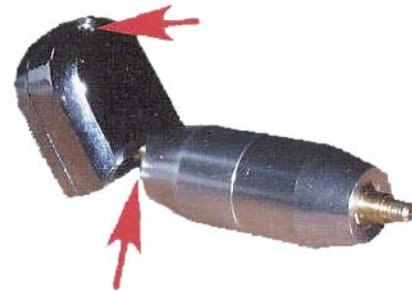

Figure 2

IMPORTANT: Be sure to use provided Thread Locker at each connection to ensure that the assembly stays tight.

Enjoy!
